

CHECKLIST OF BBM104 SPRING 2025 PROJECT ASSIGNMENT 4

Test Cases

- Contents of the assets folder must be same as the one provided at Piazza.
I used the same images as you provide us in Piazza and I put the assets in the same folder as my java files. I put them in “src” folder separately rather than putting in a folder that contains assets. I used this method to load my images: `getClass().getResourceAsStream("wall.png")`. So if you put the assets separately in src folder then my code will work correctly.
- Open the terminal at your main folder (the folder that your code needs to be compiled and run)
Terminal opens without any problem and compile my main folder.
- Run the following commands:
 - `javac -version` (must be resulted same as “javac 1.8.0_xxx”)
Version is correct.
 - `java -version` (must be resulted same as “java version “1.8.0_xxx””)
Version is correct.
- Compile your code and then run it.
My code compiles and runs without any problem.
- Show that the game opens without any crash. Your system must also read the assets by itself.
There is no problem.
- Show that Player movement and shooting works correctly. The player tank should be correctly controlled with the movement buttons and it should fire correctly with the “x” button. Firing should not look erratic(no shooting rapid fire with no wait time). Tank movement should be accompanied by a simple animation of the tank using the images provided.
These functionalities work correctly.

CHECKLIST OF BBM104 SPRING 2025 PROJECT ASSIGNMENT 4

- Show that Enemy movement and shooting works correctly. Enemies should move randomly or semi randomly and they should shoot at semi random intervals. Keep in mind that tanks should not move too erratically(constantly changing directions multiple times in a single second) and they should not be able to fire again right after firing. Enemies should spawn correctly.
Enemy tanks spawn randomly at the top of map every 2-second intervals. Enemy tanks change direction and move continuously in random directions every 1.5 seconds. Enemy tanks fire bullets at 2-second intervals. Enemy tanks continue to spawn at random intervals until there are a total of 10 on the map. When one is destroyed, a new one spawns. There is no problem.
- Show that bullets behave correctly. Bullets should hit and destroy the correct type of tanks depending on who fires them. Bullet hit should be accompanied by appropriate explosion image.
Enemy tank bullets pass through other enemy tanks. There is no problem in bullet functionalities.
- Show that walls are implemented. Walls should prevent tanks from passing through and cause bullets to disappear. There should be walls surrounding the map and inside the area itself.(You can place them as you wish)
There is no problem.
- Scoring works correctly and lives decrease as necessary.
Scoring works correctly and increases by 100 points. Lives decrease correctly.
- Pause menu works correctly. Game can be resumed or closed or restarted
Works correctly. Pressing 'P' again resumes the game.
- Game Over triggers correctly and Game Over Menu works correctly. Game can be closed or restarted.
There is no problem.

Link of the Demo Video : https://youtu.be/sK_f7L3jYok

- When player tank and enemy tank collide they treat each other like wall and they change direction. They don't overlap.
There is no problem. I didn't implement anything to make them explode when they collide.
- Enemy tanks don't overlap, they change direction when they collide.
There is no problem. They don't explode when they collide.

INCOMPLETE PARTS

- Could not implement vertical and side scrolling. (extra work)
- I didn't put my assets in a folder in src so if you try like that my code could crash. I put them separately in src folder.
